20<sup>th</sup> - 22<sup>nd</sup> September 2024

JW Marriott Mumbai Sahar

# SCIENTIFIC PROGRAM

## Dear Colleagues,

We are delighted to welcome you to the **MAX CANCER CONGRESS 2024, held from September 20<sup>th</sup> to 22<sup>nd</sup>, 2024, in Mumbai - The City of Dreams.** The Nanavati Max Institute of Cancer Care (NMICC) is one of Mumbai's premier tertiary care cancer centres. It takes great pride in providing personalised, comprehensive, evidence-based, state-of-the-art multidisciplinary cancer care delivered by highly experienced oncologists. Nanavati Max Super Specialty Hospital is poised to be one of the largest and most advanced quaternary care hospitals in western India with a two-phase expansion plan, aiming to have 650 functional beds by early 2025 and 1000 beds within three years. Cancer care is the major focus area, with advanced hybrid futuristic and robotic operating theatres, three new radiation bunkers, and state-of-the-art molecular-based precision oncology, along with 360° oncology services.

The highlights of this conference will be lectures and orientations that will focus on the integration of recent high-quality evidence in clinical practice algorithms delivered by top national and international faculties. You will enjoy the interactive symposia, debates, and case-based panel discussions in different DMG-based breakout sessions. Our surgical colleagues can look forward to interactive state-of-the-art operative video workshops by renowned surgeons. Medical oncologists can discuss the integration of molecular information in day-to-day clinical practice in a precision oncology workshop. The radiation oncology sessions will focus on a radiotherapy contouring workshop and stereotactic radiosurgery. One of the exciting features of every Max Cancer Congress is the Innovator Workshop where doctors and researchers will brainstorm on the interface between medicine and technology.

We have also planned Onco-Radio-Path tumour boards which will be highly interactive. Since our focus is holistic oncology, we will have sessions in palliative care, oncology nursing, oncology nutrition, cancer genetics, oncology anaesthesia, and critical care. There will be a separate interactive session on oncology for family physicians. Lastly, we will have an engaging session as part of the **Nidarr Hamesha support group program** for cancer warriors and their families.

Residents and students can look forward to an abundant knowledge fest and participate actively by submitting abstracts for posters and free oral paper sessions and participating in the quiz with exciting prizes.

With regards and best wishes,

# Redefining Precision With Dual Insight Molecular Residual Disease Monitoring

## Early Detection of Relapse

MRD enables the detection of residual cancer cells at the molecular level before clinical or radiological relapse, allowing for earlier intervention and potentially better outcomes.

## Tailored Treatment Decisions

MRD status informs personalized treatment decisions, helping clinicians decide whether to escalate, de-escalate, or discontinue treatment, depending on the presence of molecular disease.

## Prognostic Indicator

Detecting MRD provides valuable prognostic information, as patients with undetectable MRD often show improved outcomes, while those with detectable MRD are at higher risk of recurrence.

## Guide to Post-Treatment Surveillance

MRD detection allows for ongoing monitoring in patients who are in remission, enabling dynamic adjustments in post-treatment care and earlier detection of recurrence than traditional surveillance methods.

## Dual Layered Profiling

- Target-MRD<sub>x</sub><sup>™</sup> is the only minimal residual disease detection assay to implement personalized tumor informed MRD detection in combination with tissue agnostic MRD profiling.
- Profiling tumor-specific variants in patients through personalized assay development is customized to identify particular mutations. This tailored approach enhances the sensitivity and specificity of detecting minimal residual disease (MRD) by targeting predefined, known mutations with a limit of detection (LOD) of 0.01%.
- Tumor -agnostic approach is useful to broaden the detection spectrum. It helps capture emerging genetic variations or clones that may be missed in tumor informed approach.

# Sharpen your edge in radiosurgery

**Edge Radiosurgery: Making radiosurgery an option for more patients.**

Deliver accurate radiosurgery treatments quickly and efficiently with the Edge radiosurgery system. Edge's advanced technology enables you to offer powerful, non-invasive radiosurgery treatments anywhere in the body where radiation is indicated. Expand treatment options for patients and gain a competitive edge with the system as dedicated as you are.
